

Light Projects ^{LP}

Light Projects Group

**Specialists in the design, manufacture
and supply of lighting fittings**

An Introduction to the Light Projects Group

Established as an independent company in 1986, the Light Projects Group specialises in the design, manufacture and supply of lighting fittings and accessories for an extensive variety of interior and exterior lighting applications.

The Light Projects Group works closely with its core customers; professional lighting specifiers who include lighting designers, lighting consultants, architects and engineers. However, over the years, Light Projects has also provided their products and services to many other types and categories of client.

Our customers demand the development of innovative and flexible lighting solutions based around existing and new lighting technologies that continually evolve and currently include light emitting diodes (LEDs), fibre optics, halogen, metal halide/discharge and fluorescent lamps. Light Projects Group designs, develops and provides light fittings and light sources that utilise these technologies and meet the technical requirements, the energy efficiencies, and the environmental and aesthetic demands of our customers.

The company also offers tailored solutions for different architectural requirements and is able to provide custom and bespoke solutions where standard product ranges are not suitable to meet the lighting application required.

The Firsts

As part of the Theatre Projects Group, Light Projects was the first company to manufacture and supply low voltage lighting in Europe, supplying it for the Royal National Theatre when it relocated to the South Bank in 1976. It's interesting to note that many of the original fittings are still in place in the Olivier Theatre and, more impressively, are still working..... some 35 years later!

With the introduction of General Electric's low voltage multi-mirror lamps (MR16), which were designed for the projection industry, Light Projects adapted this technology to display lighting fittings for museum, retail and restaurant use. They are believed to be the first company to harness this lamp for exterior applications creating both a surface mounted spotlight and also a recessed uplighter in 1986.

As technology evolves, so does Light Projects. For example, with the introduction of LEDs, the company was amongst the first to modifying fittings to suit – altering a fitting manufactured by Kim Lighting in the USA to accept a 36w RGB Colour Mix LED board which was used to great effect to light the domes at Whiteley's Shopping Centres in 2002.

Today

The company continues to work closely with Lighting Designers, Lighting Consultants, Architects, Engineers and other specifying customers to provide solutions for them to realise their lighting schemes using a combination of their own UK manufactured products along with carefully selected fittings from other specialist manufacturers around the world.

Our Brands

Light Projects branded fittings are top of the range high quality products for interior and exterior architectural and display lighting for use by the professional lighting supplier.

Light Products branded fittings are quality products with commercial appeal which are suitable for all kinds of interior and exterior amenity and landscape lighting applications.

Green Line Products comprise several ranges of fittings and accessories that have been selected from our branded products for their high energy efficiency, coupled with long life, low maintenance and low life-cycle costs.

Areas of expertise

Light Projects specialises in the design, manufacture and supply of lighting fittings and accessories for an extensive variety of interior lighting and exterior lighting, commercial lighting, retail lighting and display lighting applications.

Specification:

Light Projects works closely with Lighting Designers, Lighting Consultants, Architects, Engineers and other specifying customers to provide solutions for them to realise their lighting schemes.

Product Design:

Light Projects designs and manufactures ranges of architectural and display lighting fittings with professional specifiers and specific applications in mind.

Manufacture:

Light Projects manufactures its fittings in a specialist works in South London using a dedicated and highly skilled assembly team and using locally sourced quality components where possible.

Supply:

In addition to their own ranges of fittings, LP has manufacturing partners from around the world and exclusively brings their fittings to the UK market. These include specialist and bespoke lighting fittings, spotlights and light strings as well as fibre optics and LED lighting solutions.

Service and Continuity:

Light Projects works closely with its customers; the professional lighting specifiers and considers itself to be customer based, offering an evolving range of product for their lighting requirement. We understand our responsibility to stand behind our products and service quality and are proud of the fact that we have achieved this for over 27 years, dealing with and solving problems and issues as and when they arose.

Light Projects Group - An industry leader in the design, manufacture and supply of lighting fittings.

In the words of our clients...

Light Projects has one of the most varied and useful collections of lighting products on the UK market – and they also have the most helpful and obliging staff. A great outfit that deserves to be better known among lighting specifiers, **Carl Gardner, CSG Lighting Design Consultancy**. Light Projects is one of those companies that understands consultants, not only with regard to the range of well considered specialist products but also in terms of service. In my experience they have always been prepared to go that extra mile when you really need it, **Graham Festenstein, Graham Festenstein Lighting Design**. It is refreshing to talk to a supplier who actually listens to what lighting designers need. Light Projects is one of the few that do... Their “can do” attitude makes it a pleasure to deal with them, **Peter Phillipson, Future Group Lighting Design**. No design challenge is ever too daunting for Light Projects. Their enthusiasm, commitment and expertise help us transform lighting concepts into reality, **Karen van Creveld, KVC Lighting Design**. Light Projects Group – the quintessential “can do”, “will do”, lighting company. Service with a smile, **Graham Large, Waterman Lighting Design**. The products are well designed, well made and crucially, Light Projects give our designers great advice, quickly when we need it, **Paul Traynor, Light Bureau**. With a relationship going back over twenty years I am delighted to say that not only are we still using Light Projects luminaires, we are all still on first name terms, **Adam Grater, dha designs**. Whether I’m looking for high quality, track-mounted spotlights, integrated track systems, liquorice allsorts, spreader lenses (with hotspots), smashed glass or conkers, Light Projects is my first port of call, **David Robertson, dha designs**. Smart, Sleek and Sexy... and that’s just the fittings!, **Rebecca Weir, Light IQ**. Light Projects have always been very proactive in supporting my installation projects and their intimate knowledge of light and lighting has been of great use in both the creation of effective conventional lighting and the innovation of new fixtures to meet my needs, **Durham Marengi, Durham Marengi Lighting Design**. Underlying an extremely friendly company is a range of luminaires that have been produced as a direct response to the requirements of lighting designers, often initially as specials but finding their way into the catalogue and becoming standard specifications in the lighting designer’s armoury of problem solvers. They have developed an immense experience and wealth of knowledge as to the requirements of lighting designers and represent many products in the UK market that would not otherwise be available. I commend them to you as good friends and a great resource to lighting designers everywhere!, **Kevan Shaw, Kevan Shaw Lighting Design**. Light Projects offer a mix of professionalism, punctuality and annual Scalextric nights. Who could ask for more? **Peter Veale, Firefly Lighting Design**. When I needed a supplier for a large project in London for custom fixtures, Light Projects was the company that offered the service and attention to details the project required. The company is run by imaginative and dedicated management, design and fabrication teams that work seamlessly together. Light Projects was a delight to work with and the best part was they delivered on budget and on time and always with a smile. **Robert Strohmeier, Strohmeier Lighting Inc**. A long long time ago in a galaxy far far away there was light. Only the best where able to see and understand it. This sounds as the ‘guys’ from the Light Projects Group! They realise what we want to see. No matter how far away we are. Thanks guys for your ultimate understanding, patience, accuracy, dry ‘English’ humour, quick response and Friendly faces! **Marco DeBoer, Primo Exposures BV**. After some fifteen years of using Light Projects products and technical information resources I am pleased to confirm that they have greatly contributed to our success as a professional lighting practice. Independent lighting consultants are highly dependent on the support they receive from the lighting industry in general and we can fully endorse the excellent services we have received from the Light Projects Group, as certainly one of the best in this respect, **Michael Phillips, Lighting Design & Consultancy**. When I think of Light Projects, its reliability, helpfulness, honesty and humour. So, always a pleasure to work with, **Kate Wilkins, Lighting Designer**. When I have worked with the Light Projects Group I have found the team to be extremely knowledgeable about the products they supply. Their friendly and helpful approach has been followed through to help me with each design stage of the projects I have worked on with them, **Chantelle Stewart, BDP Lighting**. For over 20 years I have followed the way that the guys at Light Projects have developed their company – all their kit is based on an understanding of what a lighting designer needs – practical lighting instruments of sensible quality, without bells and whistles, and at decent prices. They are fun to work with and really know what they are doing technically and commercially, **Andre Tammes, Lighting Design Partnership**. Well here’s an opportunity to set the record straight... So what can I say? It’s quite rare – and a genuine pleasure to be able to deal with such a civilised bunch of people! Generally they are quite well behaved, there’s a decent amount of technical knowhow to call on and not too much waffle! Combine this with some good products and the occasional scalextric tournament and it’s no wonder they are still on the short dial! **Bruce Kirk, Light Perceptions**. Some light manufacturers make very ‘pretty’ fittings but with an unusable, un-focusable, light output. Others, nice beam – pig ugly fittings. So Pig or Pretty?... No worries, Light Projects make beautiful fittings which look great and do the job the L.D. requires. **Benny Ball, BBLD**. I have been using Light Projects luminaires and services for well over 15 years on 3 continents in architectural applications and a multitude of themed environments. When quality and reliability is essential, so is Light Projects, **Joe Falzetta**. As a lighting consultant, working with Light Projects is a pleasure because the team at LP understand lighting and understand what we are trying to achieve as lighting designers. This knowledge is invaluable and enables us to enjoy a constructive and fruitful working relationship. Working with a lighting supplier that understands light and can interpret our requirements, is enormously beneficial, **Nick Hoggett, dpa lighting**. I am a big fan of Light Projects and have been for years. Why? Because Light Projects is big enough to produce high-quality, reliable gear, small enough to build that one-of-a-kind light you won’t find in anyone’s catalogue and deliver the order yesterday, of course. The team really get it, **Tracy Eck**. All positive, no downside. That about sums it up for Light Projects. This company enlists itself in a project from its creation through to its realisation with enough goodwill, enthusiasm and sound (or shouldn’t that be ‘light’?) advice to keep even the most delirious designer happy, **Peter Zygadlo**.
